Shared function

GetZoneName

This function allows you to retrieve the zone name of a certain location.

Syntax

```
string getZoneName ( float x, float y, float z, [bool citiesonly=false] )
```

Required Arguments

- **x:** The X axis position
- **y:** The Y axis position
- **z:** The Z axis position

Optional Arguments

NOTE: When using optional arguments, you might need to supply all arguments before the one you wish to use. For more information on optional arguments, see optional arguments.

- **citiesonly**: An optional argument to choose if you want to return one of the following city names:
  - Tierra Robada
  - Bone County
  - Las Venturas
  - San Fierro
  - Red County
  - Whetstone
  - Flint County
  - Los Santos

Returns

Returns the string of the zone name.
