

GetColShapeRadius

This function is used to get the radius of a colshape. Valid types are circle, sphere and tube.

Syntax

```
float getColShapeRadius ( colshape shape )
```

OOP Syntax Help! I don't understand this!

Method: *colshape:getRadius(...)*
Counterpart: *setColShapeRadius*

Required Arguments

- **shape:** The colshape you wish to get the radius of.

Returns

Returns a float containing the radius of the colshape, *false* if an invalid colshape was passed.
