

# GetBanUsername

This function is deprecated. This means that its use is discouraged and that it might not exist in future versions.

Please use getBanNick instead.

This function will return the username of the specified ban.

## Syntax

```
string getBanUsername ( ban theBan )
```

## Required Arguments

- **theBan:** The ban in which you wish to retrieve the username of.

## Returns

Returns a *string* of the username if everything was successful, *false* if invalid arguments are specified if there was no username specified for the ban.
