

IsPedDoingGangDriveby

This function checks if the ped is in the driveby state.

Syntax

```
bool isPedDoingGangDriveby ( ped thePed )
```

OOP Syntax Help! I don't understand this!

- Method:** *ped:isDoingGangDriveby(...)*
- Variable:** *.doingGangDriveby*
- Counterpart:** *setPedDoingGangDriveby*

Required Arguments

- **thePed:** The ped element whose state is to be checked.

Returns

Returns **true** if the driveby state is enabled, **false** otherwise.
