

OnClientBrowserNavigate

The event is executed when the browser loads a new page. Do not use loadBrowserURL in the attached function.

Parameters

string targetURL, bool isBlocked, bool isMainFrame

- **targetURL:** the page the browser loaded.
- **isBlocked:** if the browser was created with **isLocal** set to **true**, and the browser tried to load a remote page, this would be set to **true** (and vice-versa).
- **isMainFrame:** a boolean representing whether the entire page (main frame) was loaded or an *<iframe>* inside the page was loaded.

Source

The browser element.
