

GuiComboBoxSetItemText

This function changes the text of a combobox item.

Syntax

```
bool guiComboBoxSetItemText ( element comboBox, int itemId, string text )
```

OOP Syntax Help! I don't understand this!

Method: *GuiComboBox:setItemText(...)*

Required Arguments

- **comboBox:** The combobox containing the item you're interested in
- **itemId:** The index of the item
- **text:** The text you want to put in (does NOT accept numbers, use tostring() for that)

Returns

Returns *true* if the text was set successfully, *false* otherwise.
