

Shared function

# UtfSub

The function returns a sub string, from the specified positions on a character.

## Syntax

```
string utfSub( string theString, int Start, int End )
```

## Required Arguments

- **theString:** The string.
- **Start:** An int with the start position.
- **End:** An int with the end position.

## Returns

Returns a *string* if the function was successful, *false* otherwise.
