

# GetResourceOrganizationalPath

This function returns the organizational file path (e.g. *[admin]*) of a resource.

## Syntax

```
string getResourceOrganizationalPath ( resource theResource )
```

**OOP Syntax** Help! I don't understand this!

**Method:** *resource:getOrganizationalPath(...)*  
**Variable:** *.organizationalPath*

## Required Arguments

- **theResource:** the resource of which you want to know the organizational path

## Returns

Returns the organizational folder name of the resource. It returns empty string if the resource is on root *resources* folder. It returns **false** if the resource could not be found.
