

AclRemoveRight

This function removes the given right (string) from the given ACL.

Syntax

```
bool aclRemoveRight ( acl theAcl, string rightName )
```

OOP Syntax Help! I don't understand this!

Method: *acl:removeRight(...)*

Required Arguments

- **theAcl:** The ACL to remove the right from
- **rightName:** The ACL name to remove from the right from

Returns

Returns *true* if the given right was successfully removed from the given ACL, *false* or *nil* if it could not be removed for some reason, ie. it didn't exist in the ACL.
