

DxConvertPixels

This function converts pixels from one format to another.

Syntax

```
string dxConvertPixels ( string pixels, string newFormat [, int quality = 80 ] )
```

Required Arguments

- **pixels** : The pixels to convert the format of
- **newFormat** : The new format required ('**plain**' or '**png**' or '**jpeg**')

Optional Arguments

- **quality** : The quality of the returned pixels if the new format is '**jpeg**'

Returns

Returns a copy of the pixels in the new format, or *false* if invalid arguments were passed to the function.
