

Shared function

Utf8.char

Generates a string representing the character codepoints as arguments.

Syntax

```
string utf8.char ( [ int codepoints... ] )
```

Optional Arguments

NOTE: When using optional arguments, you might need to supply all arguments before the one you wish to use. For more information on optional arguments, see optional arguments.

- **codepoints:** An variable argument sequence of code points representing the desired unicode characters.

Returns

Returns a *string* representation of the codepoints passed.
