

Tocolor

This function retrieves the hex number of a specified color, useful for the dx functions. Added server-side.

Syntax

```
int tocolor ( int red, int green, int blue [, int alpha = 255 ] )
```

Required Arguments

- **red:** The amount of red in the color (0-255).
- **green:** The amount of green in the color (0-255).
- **blue:** The amount of blue in the color (0-255).

Optional Arguments

- **alpha:** The amount of alpha in the color (0-255).

Returns

Returns a single value representing the color.
