

# GetResourceACLRequests

This function retrieves the ACL request section from the meta.xml file of the given resource.

## Syntax

table getResourceACLRequests ( resource theResource )

**OOP Syntax** Help! I don't understand this!

**Method:** *resource:getACLRequests(...)*  
**Variable:** *.aclRequests*

## Required Arguments

- **theResource:** the resource to get the ACL requests for.

## Returns

Returns a *table* with the ACL requests for the given resource, or *false* if the resource is not valid. A valid resource with no ACL requests will return an empty table.
