

IsBrowserDomainBlocked

This function checks if the specified URL is blocked from being loaded.

Syntax

```
bool isBrowserDomainBlocked ( string address [, bool isURL = false] )
```

OOP Syntax Help! I don't understand this!

Note: *This is a static function under the **Browser** class*

Method: *Browser.isDomainBlocked(...)*

Required arguments

- **address:** A website URL

Optional arguments

- **isURL:** *true* if *address* should be parsed as URL, *false* otherwise.

Returns

Returns *false* if the URL is able to be loaded, *true* if it is blocked and *nil* if an invalid domain/URL was passed.
