

RemoveElementData

This function removes the element data with the given key for that element. The element data removal is synced with all the clients.

Note: If you want to remove the data in client side you can use 'setElementData(element, key, nil)'.

Syntax

```
bool removeElementData ( element theElement, string key )
```

OOP Syntax Help! I don't understand this!

Method: *element:removeData(...)*

Required Arguments

- **theElement:** The element you wish to remove the data from.
- **key:** The key string you wish to remove.

Returns

Returns *true* if the data was removed succesfully, *false* if the given key does not exist in the element or the element is invalid.
