

OnClientBrowserLoadingStart

The event is triggered when a webbrowser starts loading a page.

Parameters

string URL, boolean isMain

- **URL:** string containing the URL that will be loaded.
- **isMainFrame:** a boolean representing whether the entire page (main frame) was loaded or an *<iframe>* inside the page was loaded.
 - **true:** If the URL is loaded in the main frame.
 - **false:** If the URL is loaded in a *<iframe>*.

Source

The webbrowser element.
