

GetVehicleColor

This function returns the color of the specified vehicle. A vehicle can have up to four colors.

Syntax

```
int, int, int, int, int, int, int, int, int, int, int, int, int getVehicleColor ( vehicle theVehicle, bool bRGB )
```

OOP Syntax Help! I don't understand this!

Method: *vehicle:getColor(...)*

Required Arguments

- **theVehicle:** The vehicle that you wish to get the color of.
- **brGB :** A boolean specifying whether to return RGB values. A setting of *false* will result in the function returning color ids instead.

Returns

- Returns 12 ints (if bRGB is *true*) indicating the red, green and blue components of each of the 4 vehicle colors.
- Returns 4 ints (if bRGB is *false*) indicating the color ids of each of the 4 vehicle colors.
- Returns *false* if the vehicle doesn't exist.

Valid color ids if bRGB is set to false:

0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19
20	21	22	23	24	25	26	27	28	29	30	31	32	33	34	35	36	37	38	39
40	41	42	43	44	45	46	47	48	49	50	51	52	53	54	55	56	57	58	59
60	61	62	63	64	65	66	67	68	69	70	71	72	73	74	75	76	77	78	79
80	81	82	83	84	85	86	87	88	89	90	91	92	93	94	95	96	97	98	99
100	101	102	103	104	105	106	107	108	109	110	111	112	113	114	115	116	117	118	119
120	121	122	123	124	125	126
