

# GetAccountsBySerial

This function returns a table containing all accounts that were logged onto from specified serial. If the serial is empty string, it will return all accounts that were never logged onto.

## Syntax

table getAccountsBySerial ( string serial )

**OOP Syntax** [Help! I don't understand this!](#)

**Note:** *This function is a static function underneath the Account class.*

**Method:** *Account.getAllBySerial(...)*

## Required Arguments

- **serial:** The serial to get accounts from

## Returns

Returns *table* containing the accounts associated with specified serial. Returns *false* if invalid arguments were specified.
