

AclGroupRemoveACL

This function removes the given ACL from the given ACL group.

Note: The resource that's using this function needs the right to remove an acl.

Syntax

```
bool aclGroupRemoveACL ( aclgroup theGroup, acl theACL )
```

OOP Syntax Help! I don't understand this!

Method: *aclgroup:removeACL(...)*

Required Arguments

- **theGroup:** The group to remove the given ACL from
- **theACL:** The ACL to remove from the given group

Returns

Returns *true* if the ACL was successfully removed from the ACL group, *false/nil* if it could not be removed for some reason, ie. either of the elements were invalid.
