

AclGetGroup

This function is used to get the ACL group with the given name. If you need most of the groups you should consider using `aclGroupList` instead to get a table containing them all.

Syntax

```
aclgroup aclGetGroup ( string groupName )
```

OOP Syntax Help! I don't understand this!

Note: *This function is a static function underneath the ACL Group class.*

Method: *ACLGroup.get(...)*

Required Arguments

- **groupName:** The name to get the ACL group from

Returns

Returns the ACL group if it could be found. Returns false/nil if it did not exist or failed for some reason.
