

GetProcessMemoryStats

This function returns a breakdown of the process memory usage. The reported numbers are always byte units and these numbers can be **inaccurate**.

Syntax

```
table|nil getProcessMemoryStats ( )
```

Returns

Returns a table if successful, otherwise returns **nil**

Property	Description
virtual	total program size
resident	resident set size (memory in physical space/ram, also known as <i>working set</i>)
shared	size of resident shared memory (shared with other processes)
private	size of resident private memory (only for this process)

Note: Resident set size should be roughly shared + private from the table.
