

Client-side function

GuiGridListGetItemText

This function retrieves the text from a specific grid list item.

Syntax

```
string guiGridListGetItemText ( element gridList, int rowIndex, int columnIndex )
```

OOP Syntax Help! I don't understand this!

Method: *GuiGridList:getItemText(...)*

Required Arguments

- **gridList:** the gridlist containing the item you're interested in
- **rowIndex:** row id of the item (first is 0)
- **columnIndex:** column id of the item (first is 0)

Returns

Returns the text of the item if the arguments are right, *false* otherwise.
