

Modules

Modules are extensions for Nexus RP's Lua core, allowing the integration and use of custom Lua functions that have been written in C++, and compiled as a DLL or SO file. Modules are commonly used to create functions for such purposes that Nexus RP lacks, such as sockets. All modules listed here are not distributed with Nexus RP, and must be manually installed.

Modules list

You can view a list of all the documented modules here:

- [cURL](#)
- [FileSystem](#)
- [hashing](#) [**OUTDATED**]
- [NRP-MySQL](#) [**DEPRECATED**]
- [MySQL](#) [**OUTDATED**]
- [Pathfinding](#) [**OUTDATED**]
- [SHA](#) [**OUTDATED**]
- [Sockets](#)
- [Texturizer](#)

How to write modules?
