

# GetCommandHandlers

This function is used to retrieve a list of all the registered command handlers of a given resource (or of all resources). Function also added client-side.

## Syntax

```
table getCommandHandlers ( [ resource theResource ] )
```

## Optional Arguments

*NOTE:* When using optional arguments, you might need to supply all arguments before the one you wish to use. For more information on optional arguments, see optional arguments.

- **theResource:** The resource from which you wish to retrieve all command handlers. Or leave it empty to retrieve command handlers of all resources.

## Returns

Returns a *table* containing all the commands of the given resource or a table with subtables containing the command and theResource pointer ( { "command", theResource } ). See examples below if you don't understand it.
