

GetPedContactElement

This function detects the element a ped is standing on. This can be a vehicle or an object.

Syntax

```
element getPedContactElement ( ped thePed )
```

OOP Syntax Help! I don't understand this!

```
Method: ped:getContactElement(...)  
Variable: .contactElement
```

Required Arguments

- **thePed:** The ped of which you want to get the element he is standing on.

Returns

Returns an object or a vehicle if the ped is standing on one, *false* if he is touching none or an invalid element was passed.
