

IsElementWithinMarker

This function is used to determine if an element is within a marker.

Syntax

```
bool isElementWithinMarker ( element theElement, marker theMarker )
```

OOP Syntax Help! I don't understand this!

Method: *element:isWithinMarker(...)*

Required Arguments

- **theElement:** The element you're checking.
- **theMarker:** The marker you're checking.

Returns

Returns *true* if the element is within the marker, *false* otherwise
