

GetBanIP

This function will return the IP of the specified ban.

Syntax

```
string getBanIP ( ban theBan )
```

OOP Syntax Help! I don't understand this!

Method: *ban:getIP(...)*

Variable: *.ip*

Required Arguments

- **theBan:** The ban in which you want to return the IP of.

Returns

Returns a *string* of the IP if everything was successful, *false* if invalid arguments are specified if there was no IP specified for the ban.
