

XmlNodeSetValue

This function is made to be able to assign values to tags in XML files (eg. <something>anything</something>).

Syntax

```
bool XmlNodeSetValue ( XmlNode theXmlNode, string value [, bool setCdata = false] )
```

OOP Syntax Help! I don't understand this!

Method: *XmlNode.SetValue(...)*

Variable: *.value*

Counterpart: *XmlNode.GetValue*

Required Arguments

- **theXmlNode:** The xml node you want to set the value of.
- **value:** The string value you want the node to have.

ADDED/UPDATED IN VERSION 1.4.0 r6782:

- **setCdata:** A boolean indicating if you want the value to be enclosed inside CDATA tags.

Returns

Returns *true* if value was successfully set, *false* otherwise.
