

# GetModuleInfo

This function returns information about the specified module.

## Syntax

```
table getModuleInfo ( string moduleName )
```

## Required Arguments

- **moduleName:** A string containing the module you wish to get information of e.g. "hashing.dll"

## Returns

Returns a table containing information about module. These keys are present in the table:

- **version:** Module version in format X.XX
- **name:** Module name
- **author:** Module author

If invalid name for module is passed, it will return *false*.
