

# XmlDestroyNode

This function destroys a XML node from the XML node tree.

## Syntax

```
bool xmlDestroyNode ( xmlnode theXMLNode )
```

**OOP Syntax** Help! I don't understand this!

**Method:** *xmlnode:destroy(...)*

## Required Arguments

- **theXMLNode:** The xml node you want to destroy.

## Returns

Returns *true* if the xml node was successfully destroyed, *false* otherwise.
