

# GetUnbanTime

This function will return the unbanning time of the specified ban in **seconds**.

## Syntax

```
int getUnbanTime ( ban theBan )
```

**OOP Syntax** Help! I don't understand this!

**Method:** *ban:getUnbanTime(...)*

**Variable:** *.unbanTime*

**Counterpart:** *setUnbanTime*

## Required Arguments

- **theBan:** The ban in which you wish to retrieve the unban time of.

## Returns

- Returns an integer of the unbanning time in the format of seconds from the year 1970. Use in conjunction with `getRealTime` in order to retrieve detailed information.
- Returns **false** if invalid arguments are specified or if there was no unbanning time specified for the ban.
