

HttpSetResponseHeader

This function sets the value for the specified HTTP response header of the current HTML page.

Syntax

```
bool httpSetResponseHeader ( string headerName, string headerValue )
```

Required Arguments

- **headerName:** the HTTP header whose value is being set. You can find a list of header names [here](#). Header names should be all *lower case* letters.
- **headerValue:** the new value for the specified header.

Returns

Returns *true* if the header value was set successfully, *false* otherwise.
