

DetachElements

This function detaches attached elements from one another.

Syntax

bool detachElements (element theElement, [element theAttachToElement])

OOP Syntax Help! I don't understand this!

Method: *element:detach(...)*
Counterpart: *attachElements*

Required Arguments

- **theElement:** The element to be detached (the "child")

Optional Arguments

NOTE: When using optional arguments, you might need to supply all arguments before the one you wish to use. For more information on optional arguments, see optional arguments.

- **theAttachToElement:** The element you wish to detach from, will detach from the attached element if this isn't specified.

Returns

Returns *true* if the detaching was successful, *false* otherwise.
