

SetAccountPassword

This function sets the password of the specified account.

Note: Don't forget to give admin rights to the resource, in which you are using setAccountPassword function or it won't work.

Syntax

```
bool setAccountPassword ( account theAccount, string password )
```

OOP Syntax [Help! I don't understand this!](#)

Method: *account:setPassword(...)*

Variable: *.password*

Required Arguments

- **theAccount:** the account whose password you want to set
- **password:** the password

Note: The password will always be encrypted with **sha256**, other types are no longer supported. See CAccountPassword for more information.

Returns

Returns *true* if the password was set correctly, *false* otherwise.

Limits

The following limits apply:

- Minimum account password length is 1 character.
- Maximum account password length is 30 characters.
- Account password can not be equal to "*****"
