

SetPedDoingGangDriveby

This function sets the driveby state of a ped.

Syntax

```
bool setPedDoingGangDriveby ( ped thePed, bool state )
```

Required Arguments

- **thePed:** The ped element whose state is to be changed.
- **state:** A boolean value representing the drive-by state, *true* meaning enabled and *false* disabled.

Returns

Returns *true* if the driveby state could be changed, *false* otherwise.
