

GetVehicleNameFromModel

Gets the name of a vehicle by its model ID.

Syntax

```
string getVehicleNameFromModel ( int model )
```

OOP Syntax Help! I don't understand this!

Note: *This function is a static function underneath the Vehicle class.*
Method: *Vehicle.getNameFromModel(...)*

Required Arguments

- **model:** This is the vehicle model ID. See vehicle IDs to see what values will return names.

Returns

Returns the name of the vehicle if the model ID was valid, *false* otherwise.
