

GetElementParent

This function is used to determine the parent of an *element*.

Syntax

```
element getElementParent ( element theElement )
```

OOP Syntax Help! I don't understand this!

- Method:** *element:getParent(...)*
- Variable:** *.parent*
- Counterpart:** *setElementParent*

Required Arguments

- **theElement:** The child of the parent element you want returned.

Returns

This returns the parent as an *element*. It returns *false* if *theElement* is invalid, or is the root node.
