

GetTrainSpeed

Gets the speed at which a train is traveling on the rails.

Syntax

float getTrainSpeed (vehicle train)

OOP Syntax Help! I don't understand this!

Method: *vehicle:getTrainSpeed(...)*

Variable: *.trainSpeed*

Counterpart: *setTrainSpeed*

Required Arguments

- **train:** the train of which to retrieve the speed.

Returns

Returns the train's speed if successful, *false* otherwise.
