

# GetVehicleModelFromName

This function retrieves the model ID of a vehicle as an integer value from its name.

## Syntax

```
int getVehicleModelFromName ( string name )
```

**OOP Syntax** [Help! I don't understand this!](#)

**Note:** *This function is a static function underneath the Vehicle class.*  
**Method:** *Vehicle.getModelFromName(...)*

## Required Arguments

- **name:** A string containing the name of the vehicle.

## Returns

Returns an integer if the name exists, *false* otherwise. If you use this function on vehicles with shared names, such as "police", it will return the earliest occurrence of that vehicle's ID.
