

# GuiEditSetMasked

This function sets or removes masking (covering up the text being typed) for password text fields.

## Syntax

bool guiEditSetMasked ( element theElement, bool status )

**OOP Syntax** Help! I don't understand this!

**Method:** *GuiEdit:setMasked(...)*

**Variable:** *.masked*

**Counterpart:** *guiEditIsMasked*

A masked text

## Required Arguments

- **theElement:** The edit box to be changed.
- **status:** A boolean value indicating whether masking is to be enabled or disabled.

## Returns

Returns *true* if the function is successful, *false* otherwise.
