

AclCreateGroup

This function creates a group in the ACL. An ACL group can contain objects like players and resources. They specify who has access to the ACL's in this group.

Syntax

```
aclgroup aclCreateGroup ( string groupName )
```

OOP Syntax Help! I don't understand this!

Method: *ACLGroup(...)*

Required Arguments

- **groupName:** The name of the group to create

Returns

Returns the pointer to the created aclgroup if successful. Returns false if failed.
