

# FileGetSize

Returns the total size in bytes of the given file.

## Syntax

```
int fileGetSize ( file theFile )
```

**OOP Syntax** Help! I don't understand this!

**Method:** *file:getSize(...)*  
**Variable:** *.size*

## Required Arguments

- **theFile:** the file handle you wish to get the size of.

## Returns

Returns the file size if successful, or *false* if an error occured (e.g. an invalid file handle was passed).
