

OnClientFileDownloadComplete

This event is triggered when a file has been downloaded after downloadFile has been successfully called.

Parameters

string fileName, bool success, resource requestResource

- **fileName**: the file downloaded.
- **success**: whether successful or not.

ADDED/UPDATED IN VERSION 1.5.7-20468 :

- **requestResource**: the resource that called downloadFile.

Source

The source of this event is the root element of the resource that downloaded file.
