

GetBrowserSource

This function can be used to retrieve the source code of a website (asynchronously). The size of the source code is limited to 2 MiB (remaining bytes are cut).

Syntax

```
bool getBrowserSource ( browser webBrowser, function callback )
```

OOP Syntax [Help! I don't understand this!](#)

Method: *browser.getSource(...)*

Required arguments

- **webBrowser:** The browser element you want to get the source of
- **callback:** a callback function with syntax as described below

Callback syntax

```
function ( string code )
```

Returns

Returns *true* if valid arguments have been passed, *false* otherwise.
