

GuiStaticImageGetNativeSize

This function gets the native size of image. That means the original size in pixels of the image file.

Syntax

```
int, int guiStaticImageGetNativeSize ( element theImage )
```

Required Arguments

- **theImage:** The static image element to get the original size of.

Returns

Returns two integers where first is the width and second the height of the image in pixels, *false* if the image element was invalid.
