

# FileCopy

This function copies a file.

**Note:** The file functions should not be used to implement configuration files. It is encouraged to use the XML functions for this instead.

**Tip:** If you do not want to share the content of the created file with other servers, prepend the file path with @ (See filepath for more information)

## Syntax

```
bool fileCopy ( string filePath, string copyToFilePath [, bool overwrite = false ] )
```

**OOP Syntax** Help! I don't understand this!

**Note:** *This function is a static function underneath the File class.*

**Method:** *File.copy(...)*

## Required Arguments

- **filePath:** The path of the file you want to copy.
- **copyToFilePath:** Where to copy the specified file to.

## Optional Arguments

- **overwrite:** If set to true it will overwrite a file that already exists at copyToFilePath.

## Returns

Return true if the file was copied, else false if the 'filePath' doesn't exist.
