GetPedOxygenLevel

This function returns the current oxygen level of the specified ped.

Syntax

```
float getPedOxygenLevel ( ped thePed )
```

OOP Syntax Help! I don't understand this!

>**Method**: *ped:getOxygenLevel(...)*
>**Variable**: *.oxygenLevel*
>**Counterpart**: *setPedOxygenLevel*

Required Arguments

- **thePed:** The ped whose oxygen level you want to check

Returns

A *float* with the oxygen level, *false* if an invalid ped was given.
