CountPlayersInTeam

This function is for returning the number of players in the specified team.

Syntax

```
int countPlayersInTeam ( team theTeam )
```

OOP Syntax Help! I don't understand this!

Method: *team:countPlayers(...)*
Variable: *.playerCount*

Optional Arguments

* **theTeam:** The team you wish to retrieve the player count of.

Returns

Returns an integer containing the number of players in the team, *false* if it could not be retrieved.
