GetAccountIP

> **ADDED/UPDATED IN VERSION 1.5.5 r11747:**
>
> This function retrieves the IP address of an account.

Syntax

```
string getAccountIP ( account theAccount )
```

OOP Syntax Help! I don't understand this!

> **Method**: *account:getIP(...)*
> **Variable**: *.ip*

Required Arguments

- **theAccount:** The account you wish to get the IP of.

Returns

Returns a string containing the account's IP, *false* if the account does not exist or an invalid argument was passed to the function.
