GuiGridListSetColumnWidth

This allows you to set the width of an existing column in a gridlist.

Syntax

```
bool guiGridListSetColumnWidth ( element gridList, int columnIndex, number width, bool relative )
```

OOP Syntax Help! I don't understand this!

> **Method**: *GuiGridList:setColumnWidth(...)*

Required Arguments

- **gridList:** The grid list you want to add a column to
- **columnIndex:** Column ID of the size you want to change
- **width:** A float or integer of the width of the column depending on the **relative** argument.
- **relative:** A boolean defining whether **width** measurements will be relative to the Gridlist size, or absolute pixels.

Returns

Returns *true* if the gridlist column width was successfully set, *false* if bad arguments were given.
